## DETAILED ACTION REASON FOR ALLOWENCE

Claims 1-12 are allowed.

The following is an examiner's statement of reasons for allowance: Claim 1 is allowable because of the prior art, either singly or in combination, fails to anticipate or render obvious, the method, including step for finding a first value by calculating an energy which represents a total energy of the association complex formed of the cation and the anion while the association complex is in a stable state; a third step for finding a second value by calculating the total energy of a radical species derived from oneelectron reduction of the association complex, and a third value by calculating the total energies of radical species derived from one-electron reduction of the association complex; a fourth step for finding a fourth value by subtracting the second value from the first value, and finding a fifth value by subtracting the first value from the third value; a fifth step for finding a sixth value by subtracting the fourth value from the fifth value; and a sixth step for determining whether or not the sixth value exceeds a given target value, wherein the second process sets the respective surface areas of the positive electrode and the negative electrode based on the sixth value of the electrolyte selected. These features in combination with the other elements of the claim are neither disclosed nor suggested by the prior art of record.

The following is an examiner's statement of reasons for allowance: Claim 12 is allowable because of the prior art, either singly or in combination, fails to anticipate or

Art Unit: 2812

render obvious, the method, including step for finding a plurality of first values by calculating respective energies state which represents total energies of the association complexes, the cations or the anions individually while they are in a stable state; finding a plurality of second values by calculating the total energies of radical species derived from one-electron reduction of the association complexes, the cation and the anion, and a plurality of third values by calculating the total energies of radical species derived from one-electron oxidization of the association complex, the cation and the anion; finding a plurality of fourth values by subtracting the second value from the first value of the plurality of different association complexes, the cation and the anion individually, and finding a plurality of fifth values by subtracting the first value from the third value of the plurality of different association complexes, the cation and the anion individually; selecting a maximum forth value from among the fourth values of the plurality of different association complexes, the cation and the anion individually, and selecting a minimum fifth value from among the fifth values of the plurality of different association complexes, the cation and the anion individually, and subtracting the maximum fourth value from the minimum fifth value for finding a sixth value. These features in combination with the other elements of the claim are neither disclosed nor suggested by the prior art of record.

Claims 2-11 depend from claim 1 so they are allowable for the same reason.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably Art Unit: 2812

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kyoung Lee whose telephone number is (571) 272-1982. The examiner can normally be reached on M-F 8:30AM - 5:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael S. Lebentritt can be reached on (571) 272-1873. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
